Welcome

This guide shows you how to use the India Learns portal, one step at a time, in plain language. You don't need to be technical. Each task is written as **“click this -> a form opens -> fill it -> save.”**

The website: open <https://india-learns-lms.onrender.com> in Chrome (or any browser).

Words we use:

- **Program** = a diploma or certificate (e.g. *Diploma in Fashion & Retail Management*).

- **Course** = a subject inside a program.
- **Module / Session** = a topic inside a course (where the videos and PDFs live).
- **Batch** = a group of students who study together.

Two things to know up front:

1. **Naming quirk:** in the left menu, “**Add & View Programs**” is where you create diplomas. The menu item just below it, “**Programs**”, actually opens the list of **courses**. This guide always tells you which one to click.
 2. **Who does what:** as an **admin** you set up the structure — programs, batches, logins, enrolments, fees, timetable. The actual **teaching content** (uploading videos/PDFs, publishing a course) is done by the **teacher assigned to that course**, signing in with their own login. This is by design (see section 5).
-

1. Signing in

1. Open the website. You’ll see the **Welcome back** screen.
2. Type your **Email address** and **Password** (these were given to you).
3. Click **Sign in**.

You’re now on your **Dashboard**.

Forgot your password? The reliable way is to ask **another admin** to reset it for you — every login has a **Reset password** button (see section 7). *(There is a “Forgot your password?” link on the sign-in screen, but automatic emails may not be switched on, so an admin reset is the sure route.)*

2. Getting around (the layout)

Once you sign in, every screen has the same frame:

- **Top bar (blue):** the India Learns logo on the left; a bell for notifications; your name and role; and a **Log out** button on the right.
- **Left menu (sidebar):** your sections — Dashboard, Users, Programs, Finance, and so on. Click any item to open it.
- **On a phone:** tap the **menu** button (three lines) at the top-left to open the menu.

An **Admin / Super Admin** sees every section below.

3. Add a Program (a diploma)

1. In the left menu, click **Add & View Programs**.
2. You’ll see **Programs** (the list of existing ones) and, lower down, a **Create program** card.
3. In the **Name** box, type the full name, for example: *Diploma in Fashion & Retail Management*.
4. The **Slug** box fills in **automatically** (e.g. diploma-in-fashion-retail-management). This is just the web-address version of the name — **you don’t need to touch it**.

5. Click **Create program**.

Done! The new program appears in the list with a green **Active** tag.

To delete a programme you added by mistake: click **Delete** on its row in the list, then **Confirm delete**. If it still has courses, batches, students, enrolments or fee structures attached, the system refuses and tells you exactly what's attached — clear those first, then delete. (Deleted programmes are archived, not erased, so we can restore one if it goes wrong.)

Note: Earlier, **Create program** showed “*Request failed validation*” when the Slug had a space in it. That's fixed — the slug now fills in for you, and any spaces or capitals are corrected automatically. Just type the **Name** and click **Create program**.

The three programs to add this way:

1. Diploma in Fashion & Retail Management
 2. Diploma in Digital Fashion & Entrepreneurship
 3. Certificate Programme in Fashion Styling, Image Consulting & Personal Branding
-

4. Courses inside a program

Click **Programs** in the left menu (the item just under *Add & View Programs*). This opens the **Courses** list — every course, with a status tag (**Sandbox** = draft, not visible to students; **Published** = live to students).

Where courses come from — import them yourself (Super Admin): courses, modules and lessons aren't typed in one at a time — they're brought in from the **curriculum generator** in one step. As a Super Admin you can do this yourself:

1. In the left menu, click **Curriculum import**.
2. Under **Choose a curriculum**, pick the course by name from the dropdown (e.g. *Diploma in Fashion Design and Retail Management*). It previews automatically. (*The first click can take ~30 seconds while the generator wakes up.*)
3. Check the preview. If it shows “☐ *N repeated lessons will be removed automatically,*” that's expected and good — the system strips exact duplicate lessons for you.
4. Under **Step 2 — Import**, choose the **Target program** and click **Import**. To refresh a course you imported before, tick **Replace existing** first.

The course then appears in the **Programs** (Courses) list. Repeated lessons (same title *and* objectives) are removed automatically on every import.

Prefer your own finalized Word lesson plan? On the same **Curriculum import** screen, use **Upload a finalized lesson plan (Word)**:

1. Choose your **.docx** file — it instantly shows how many modules and lessons it read.
2. Pick the **Target program**.
3. Choose **Create a new course** (give it a name) or **Replace an existing course** (pick it from the list).
4. Click **Create course / Replace lessons**.

The document becomes the source — the app rebuilds the course's modules and lessons from your file exactly (your edits and de-duplication are kept as-is). This is the way to get a hand-edited lesson plan

into the app; a re-import from the generator would overwrite it, so keep such courses on the upload path.

To look inside a course, click it. It opens in the **course workspace** with tabs across the top:

Overview | Content | Glossary | Reading list | Gradebook | Students | Announcements | Settings

You'll see a yellow "oversight mode — edits are disabled" banner. That's normal. Admins view courses read-only. The teaching is done by the assigned teacher (next section). Use these tabs to *check* things — e.g. the **Students** tab shows everyone enrolled.

5. Get a course ready: assign a teacher

Because admins are read-only inside a course, **the teacher assigned to a course is the one who uploads content and publishes it.** So your job is to assign that teacher.

1. Open the course (section 4) and stay on the **Overview** tab.
2. Find the **Teaching faculty** card and **add** the teacher who will run this course (they must already have a Faculty login — see section 7).
3. That teacher now signs in with **their own** login and:
 - uploads videos / PPTs / PDFs (up to 25 MB each, or pastes a link for big files), and
 - clicks **Publish course** when it's ready for students.

The step-by-step for the teacher is in the **Faculty Guide** (sections 4–5). Hand them that guide.

In short: *Admin creates the login and assigns the teacher -> the teacher uploads content and publishes.* If you ever see the upload/publish buttons greyed out, it's because you're an admin (oversight mode) — assign a teacher and let them do it.

6. Create Batches

1. In the left menu, click **Batches**.
2. In the **Create batch** card, fill in:
 - **Name** (e.g. *Fashion & Retail — July 2026*)
 - **Program** (pick from the dropdown)
 - **Capacity** (default 30 students)
 - **Start date** and **End date**
3. Click **Create**.

The batch appears under **Existing batches**.

Create the batch **before** you create student logins (section 7), because you'll pick the batch there.

7. Create logins for students, teachers and staff

This is how you give someone an email + password to sign in. **No email is sent — you copy the password and hand it over yourself.**

1. In the left menu, click **Create login**.
2. Choose the **Role**: *Student*, *Faculty* (teacher), *Admin*, or *Admissions officer*.
3. Fill in **Full name**, **Email (login)**, and **Phone** (a plain 10-digit mobile number is fine, e.g. 9876543210).
4. **For a student**: also pick the **Program** and **Batch**, and keep the box “**Enrol this student in the selected program**” ticked.
 - The **Program** (section 3) and a **Batch** for it (section 6) must already exist. If the **Batch** dropdown is empty, go create the batch first, then come back.
5. Click **Create login**.

A password is generated and shown. Below it is the **credentials table** — a list of every login with its **email and password**:

- Click **show** to reveal a password (**hide** to hide it again).
- Click **copy** to copy it.
- Click **Reset password** to generate a new one (the old one stops working).

Copy the email and password and give them to the person. They sign in at the same website with those details.

Did the student actually get enrolled? Enrolment only works if the program already has courses (from the curriculum import). After clicking **Create login**, read the green success message: it should say “**enrolled in N courses**”. **If it does *not* mention enrolment, the student was created but NOT enrolled** — set up the courses first, then contact support to enrol them. (You can’t re-run *Create login* for an email that already exists.)

8. Enrolments

Click **Enrolments** in the menu to **see** every student–course link (Student, Course, Batch, Status, Valid to). This screen is for viewing only.

To enrol a student, use **Create login** (section 7): pick the student’s **Program** and **Batch** and tick **Enrol**. That’s what gives them course access.

If the student’s login **already exists**, you can’t create it again (the email is taken). To enrol an existing student into a further program, contact your India Learns support.

9. Timetable (weekly classes)

1. In the left menu, click **Timetable**.
2. On the **Timetable builder**, pick the **Batch**.
3. In the **Add a class** card:
 - Choose the **Course** and the **Teacher** from the dropdowns.
 - Pick the **Day**, set the **Start time** and **End time** (normal clock times), and type the **Room**.

4. Click **Add class**. It appears under **Weekly schedule** — each row shows the day, time, course, teacher and room, with a **Delete** button.

No codes or IDs to type — just pick from the lists. If the **Course** dropdown is empty, the program has no courses yet (import the curriculum first). If the **Teacher** dropdown is empty, create a Faculty login first (section 7).

10. Fees and payments

Before you record a payment: a student can only have an *Outstanding* balance if a **fee plan (fee structure)** has been set up for their batch. If the Outstanding amount shows nothing, the student has no fee plan yet — fee structures are configured during onboarding, so ask your India Learns contact if you're not sure.

1. In the left menu, click **Finance** to see collections.
 2. Click **Record payment**. On **Record a payment**:
 - **Step 1** — pick the **Student**.
 - **Step 2** — check the **Outstanding** balance shown.
 - **Step 3** — enter the **Amount (Rs)**, choose a **Method** (cash / UPI / bank transfer / cheque), add a **Reference** (UTR / cheque no.) and **Notes** if needed.
 3. Click **Record payment & issue receipt**.
-

11. Showcase — present brochures to a visitor

Use this to open the company profile and program brochures full-screen when you're sitting with a prospective student.

1. In the left menu, click **Showcase**.
2. You'll see cards: **India Learns — Company Profile** and the **program brochures**.
3. Click **Present** on any card to open it full-screen and show it.

To add a new brochure or change an existing one: the brochure files are large, so they can't be uploaded from this screen. Send the PDF files to your India Learns contact (Vidit) and they'll be added for you.

12. Other useful sections

- **Users** — view and manage everyone (edit, suspend). *Create login* (section 7) is the fast way to add someone.
- **Faculty** — see teachers and the courses they're assigned to.
- **Visitor Leads** — capture a walk-in prospect's details (name, phone — 10 digits is fine — qualification, etc.) for follow-up.
- **Tickets** — student support requests.
- **Fee structures** — set up the fee plans that section 10 collects against (usually configured during onboarding).

- **Reports** — attendance, assignments and fees across batches.
 - **Staff attendance** — mark staff/faculty attendance.
 - **Audit log** — a record of who changed what.
-

Quick tips

- **A 10-digit phone number always works now** — you don't need to type +91.
- **You never need to type a “slug”** — it fills in from the name.
- **Can't upload or publish inside a course?** That's expected for admins — assign a teacher (section 5); they do it.
- If a screen shows a red message, read it — it now tells you exactly which field to fix.
- Use **Log out** (top-right) when you're done on a shared computer.
